

A large, solid red circle with a white capital letter 'A' centered inside it.

A

A large, solid red circle with a white capital letter 'A' centered inside it.

A

A large, solid red circle is centered on a white background. Inside the circle, the letter 'A' is written in a bold, white, sans-serif font. The letter is perfectly centered both horizontally and vertically within the circle.

Lifetime of B^* state

- ★ The excited state B^* must decay before the recoil momentum is randomized in the lattice and its spin alignment is lost

$$\tau(B^*) \ll \tau_{\text{stop}} \sim 10^{-13} \text{ s}$$

—Otherwise, the spin projection of B^* is randomized, and it no longer tags the neutrino helicity.

What are these nuclei
A and *B*?
