

Electric Charge

★ Theoretically:

$$|q_\nu| = 0$$

Could neutrino have a millicharge?

★ Experimentally:

At reactors:

$$\sigma(\nu + e) \propto \frac{q_\nu^2}{T}$$

$$|q_\nu| < 10^{-12} e$$

Matter

Neutrality:

$$n \rightarrow p + e^- + \bar{\nu}_e$$

$\underbrace{\hspace{1.5cm}}_{q_p + q_e = 0}$

$$|q_\nu| < 10^{-21} e$$

Spin
