Gell-Mann being a student during a week tried to ‘prove’ that parity is conserved as a home exercise of prof. Feshbach

Gell-Mann

Feynman

1955. Gell-Mann and Feynman discussed that parity can be violated but did not connect this with $\tau - \theta$ puzzle

1956. Feynman claimed during a Rochester conference that his roommate Block suggested that parity can be violated. But he forgot to add “in weak interactions”. Yang, chairing the session responded that this hypothesis is ruled out.
