

Step 6. The results

The measurements:

$$\frac{W(0) - W(\pi)}{W(0) + W(\pi)} = -0.25$$

$$\frac{W(0) - W(\pi)}{W(0) + W(\pi)} = A \cdot P \cdot \frac{v}{c} \cdot f_{\text{bs}} = A \cdot 0.65 \cdot 0.6 \cdot \frac{2}{3} = -0.25$$

$$A \approx -1$$

Electrons are emitted preferentially in the direction, opposite to the nuclear spin

Spin of electron in cobalt decay
